Asymptotic combinatorics with applications to mathematical

Asymptotic Combinatorics with Application to Mathematical Physics edited by Vadim Malyshev I.N.R.I.A., Le Chesnay, France and Anatoly Vershik Steklov Mathematical Institute of Russian Academy of Sciences, S1. Petersburg, Russia Springer Science+Business Media, B.V.

Asymptotic Combinatorics with Application to Mathematical

New and striking results obtained in recent years from an intensive study of asymptotic combinatorics have led to a new, higher level of understanding of related problems: the theory of integrable systems, the Riemann-Hilbert problem, asymptotic representation theory, spectra of random matrices, combinatorics of Young diagrams and permutations ...

a variety of applications of interest in computer science and mathematics. Induction and recursion play a fundamental role in mathematics. The usefulness of recursion in computer science and in its interaction with combinatorics is the subject of Part III. In Part IV we look at generating functions, a powerful tool for studying counting ...

Foundations of Combinatorics with Applications

Among the contributed papers are articles on: (i) multiple basic hypergeometric functions with applications to the number theory, (ii) birational representations of affine Weyl groups with applications to discrete integrable systems, (iii) algebraic geometry and Painleve VI, and (iv) combinatorics of Kostka-Foulkes polynomials.

Asymptotic theory of path spaces of graded graphs and its

A theorem in the Flajolet-Sedgewick theory of symbolic combinatorics treats the enumeration problem of labelled and unlabelled combinatorial classes by means of the creation of symbolic operators that make it possible to translate equations involving combinatorial structures directly (and automatically) into equations in the generating functions of these structures.
