The purpose of this page is to provide resources in the rapidly growing area of computer-based statistical data analysis. This site provides a web-enhanced course on various topics in statistical data analysis, including SPSS and SAS program listings and introductory routines. Topics include questionnaire design and survey sampling, forecasting techniques, computational tools and demonstrations.

A black hole is a region of spacetime exhibiting such strong gravitational effects that nothing "not even particles and electromagnetic radiation such as light" can escape from inside it. The theory of general relativity predicts that a sufficiently compact mass can deform spacetime to form a black hole. The boundary of the region from which no escape is possible is called the event horizon.

In quantum statistics, Bose-Einstein statistics (or more colloquially Bose-E statistics) is one of two possible ways in which a collection of non-interacting indistinguishable particles may occupy a set of available discrete energy states, at thermodynamic equilibrium. The aggregation of particles in the same state, which is a characteristic of particles obeying Bose-Einstein statistics ...

where  $\ln$  is the natural logarithm. The entropy is non-negative and is at most the natural log of the number of elements in  $X$ . Entropy is a fundamental concept in information theory: in the paper that originated that field, Shannon (1948) described entropy as "a measure of how much "choice" is involved in the selection of an event". Thus a distribution with higher entropy involves ...

Albert Einstein was born in Ulm, in the Kingdom of Württemberg in the German Empire, on 14 March 1879. His parents were Hermann Einstein, a salesman and engineer, and Pauline Koch. In 1880, the family moved to Munich, where Einstein's father and his uncle Jakob founded Elektrotechnische Fabrik J. Einstein & Cie, a company that manufactured electrical equipment based on direct current.

Right. So, the sensitivity to doubling CO2 is at least 1.5C. Curry put it at 1.64C. We will more than double CO2, by 2100 in the absence of mitigation, so an increase past 2C is a best case scenario, 6C is a real
