farewell to entropy a pdf

Perhaps, the earliest association of changes in entropy in spontaneous processes with increase of disorder is already implied in Boltzmann's writings. Clearly, heat or thermal energy is transferred from the hot to the cold gas.

Evidence For Christianity By Josh McDowell

The four laws of thermodynamics define fundamental physical quantities (temperature, energy, and entropy) that characterize thermodynamic systems at thermal equilibrium. The laws describe how these quantities behave under various circumstances, and forbid certain phenomena (such as perpetual motion).
