

functional programming in c pdf

In computer science, functional programming is a programming paradigm—a style of building the structure and elements of computer programs—that treats computation as the evaluation of mathematical functions and avoids changing-state and mutable data. It is a declarative programming paradigm, which means programming is done with expressions or declarations instead of statements.

In functional programming, a monad is a design pattern that allows structuring programs generically while automating away bookkeeping code needed by the program logic. Monads achieve this by providing their own data type, which represents a specific form of computation, along with one procedure to wrap values of any basic type within the monad (yielding a monadic value) and another to compose ...

An object oriented design is independent of the language and you can of course design your system using UML. Some tools like Rhapsody will also allow code generation and round-tripping, we use for some special projects where C++ is not an option.
