A bridge is a fixed dental restoration (a fixed dental prosthesis) used to replace one or more missing teeth by joining an artificial tooth definitively to adjacent teeth or dental implants.. A bridge will span the area where teeth are missing. They are attached to the natural teeth or implants that surround this space. The natural teeth or implants which support the bridge are called abutments.

More than 5 million teeth are avulsed each year due to sports injuries and trauma, 1 and in certain cases these avulsions can be attributed to the absence of a mouthguard or to improperly fabricated and fitted mouthguards. Not only do mouthguards protect the teeth, but they also protect the head against a blow to the jaw that can result in a concussion and loss of consciousness.

### **Athletic Mouthguards: Indications, Types, and Benefits**

Blepharospasm, characterized by intermittent or sustained closure of the eyelids caused by involuntary contractions of the orbicularis oculi muscle, including blepharospasm associated with dystonia and benign essential blepharospasm.
