Lead is the axial advance of a helix or screw during one complete turn ( $360^\circ$ ) The lead for a screw thread is the axial travel for a single revolution.. Pitch is defined as the axial distance between adjacent threads on a helix or screw. In most screws, called "single start" screws, which have a single helical thread along their length, the lead and pitch are equal.

Definition. There are two definitions for the factor of safety: The ratio of a structure's absolute strength (structural capability) to actual applied load; this is a measure of the reliability of a particular design. This a calculated value, and is sometimes referred to, for the sake of clarity, as a realized factor of safety.; A constant required value, imposed by law, standard ...
