Chirality / k aÉa È r Ái | Éa t i / is a geometric property of some molecules and ions. A chiral molecule/ion is non-superposable on its mirror image. The presence of an asymmetric carbon center is one of several structural features that induce chirality in organic and inorganic molecules. The term chirality is derived from the Ancient Greek word for hand, ἡ χεὶρ (kheir).

Chirality (chemistry) - Wikipedia

Chemistry is the scientific discipline involved with elements and compounds composed of atoms, molecules and ions: their composition, structure, properties, behavior and the changes they undergo during a reaction with other substances.. In the scope of its subject, chemistry occupies an intermediate position between physics and biology. It is sometimes called the central science because it ...

La definición de Brønsted-Lowry, formulada independientemente por sus dos autores Johannes Nicolaus Brønsted y Thomas Martin Lowry en 1923, se basa en la idea de la protonación de las bases a través de la desprotonación de los Ácidos, es decir, la capacidad de los Ácidos de "donar" cationes hidrógeno (H +)

a las bases, quienes a su vez, los "aceptan". [8]
