1.4. RANDOM SIGNALS IN PRACTICE We model x as a random variable with a probability density function dependent upon which hypothesis is present \hat{H}_0 or \hat{H}_1 . $f(x|H_0)$ and $f(x|H_1)$ are the conditional density functions. The area under $f(x|H_0)$ is 1. Conditional density function on x We decide that the hypothesis signal is present if $x > v_T$, where v_T

Probability, Statistics, and Random Signals offers a comprehensive treatment of probability, giving equal treatment to discrete and continuous probability. The topic of statistics is presented as the application of probability to data analysis, not as a cookbook of statistical recipes.

For example, engineers generally have good experience and intuition about transforms, such as Fourier transforms, Fourier series, and z-transforms, and some associated methods of complex analysis.

Random Processes for Engineers 1 - University Of Illinois

Random Signal Analysis in Engineering Systems covers the concepts of probability, random variables, averages, simulation, and random signals. The book discusses set theory and probability; random variables and vectors; and the functions of random variables.
