Although the formal definition of an elliptic curve is fairly technical and requires some background in algebraic geometry, it is possible to describe some features of elliptic curves over the real numbers using only introductory algebra and geometry.. In this context, an elliptic curve is a plane curve defined by an equation of the form $y^2 = x^3 + ax + b$ where a and b are real numbers.

In mathematics, Fourier analysis (/ ˈfɔːr i eɪə, -i ˈtɪr /) is the study of the way general functions may be represented or approximated by sums of simpler trigonometric functions. Fourier analysis grew from the study of Fourier series, and is named after Joseph Fourier, who showed that representing a function as a sum of trigonometric functions greatly simplifies the study of heat transfer.
