In mathematics, physics, and engineering, a Euclidean vector (sometimes called a geometric or spatial vector, or "as here" simply a vector) is a geometric object that has magnitude (or length) and direction. Vectors can be added to other vectors according to vector algebra. A Euclidean vector is frequently represented by a line segment with a definite direction, or graphically as an arrow ...

Flight dynamics is the science of air vehicle orientation and control in three dimensions. The three critical flight dynamics parameters are the angles of rotation in three dimensions about the vehicle's center of mass, known as pitch, roll and yaw.. Aerospace engineers develop control systems for a vehicle's orientation (attitude) about its center of mass.

The GLG Toolkit redefines the meaning of the word "framework". Usually, a framework is a structure for enclosing an application, so that the entire application has to be written within it, instead of integrating into a native programming environment.

This text presents the basic theory and practice of system dynamics. It introduces the modeling of dynamic systems and response analysis of these systems, with an introduction to the analysis and design of control systems.
